

4mm [Acid Etched Glass](#)--- manufactured by China building glass factory

Acid etched frosted glass is a kind of chemical etching glass. The insoluble substance adhere on the glass surface during the chemical reaction. With the continuation of the reaction, the reactants piled into the granular crystals and firmly adhere on the surface. As the reactants adhere on the surface, it prevents the further reaction of acid etching. Then we get a translucent matte surface, this translucent matte surface make the incident light scattering, it's a kind of translucence and obscure feeling, so called it as frosted glass.

SGG Acid Etched Glass Specifications:

1. Glass thickness: 3mm, 4mm, 5mm, 6mm, 8mm, 10mm, 12mm, 15mm, 19mm.
2. Glass substrate: clear glass, ultra clear glass, tinted glass, silkscreen glass, etc.
3. Glass color: transparent, ultra clear, french green, dark green, dark gray, euro gray, dark blue, ford blue, etc.
4. Standard size: 1830mm*2440mm, 2140mm*3300mm, etc.

Features:

1. Etching one side or both sides are available
2. The etching frosted glass has a translucent appearance, so it's used as privacy glass.
3. The smooth surface
4. The translucent matte surface make the incident light scattering, so it also reduce the reflected glare.

Acid Etched Glass Applications:

1. Acid Etched Glass doors, windows, shower doors, etc.
2. Etched Opaque Glass balustrades, glass railing, glass fence, etc.
3. Translucent Acid Etched Glass skylight, Glass Canopy, Glass Ceiling, etc.
4. Etched Glass louver panels, Glass shelves, etc.
