

6mm Tempered Fluted Glass Shower Door System

Installing glass shower enclosures would be an interesting way to give your bathroom a new, elegant look without remodeling the whole space. Available in customizable pleasing designs, glass shower enclosures have become very popular among builders and homeowners for creating beautiful bathroom interiors. A glass shower helps in creating a separate bathing space within the bathroom.

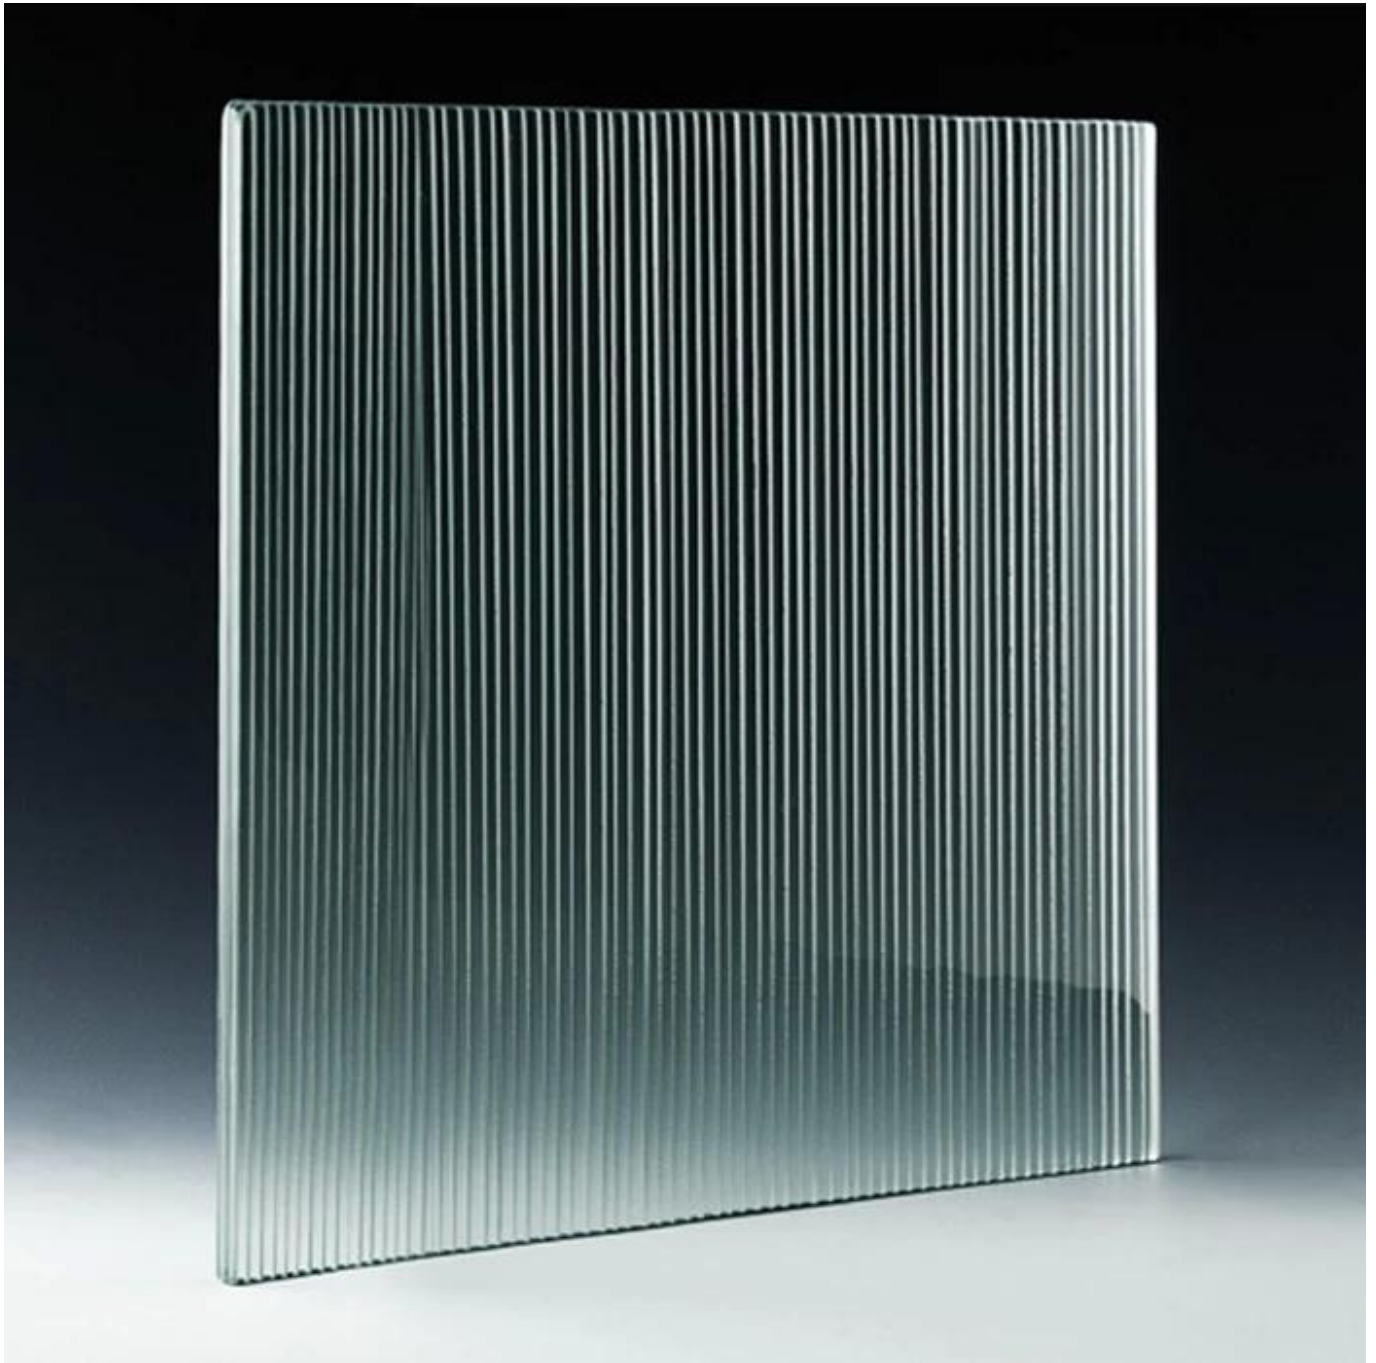

Glass for Shower Door

Fluted glass is identifiable by its vertical grooves. It is sometimes referred to as ribbed, reeded or textured glass and is highly popular among architects and interior designers looking to add texture to a living space whilst diffusing light and adding an element of privacy.

It is one of the latest interior design trends within both residential and commercial properties. This decorative glass is crafted with smooth vertical patterns providing an elegant combination of visibility and privacy. The linear curves create the illusion of smooth flowing streams of water especially in clear glass, offering a sense of clarity that benefits any room. The fluted structure of this decorative glass enables light to dance from flute to flute for a luxurious and sophisticated aesthetic.

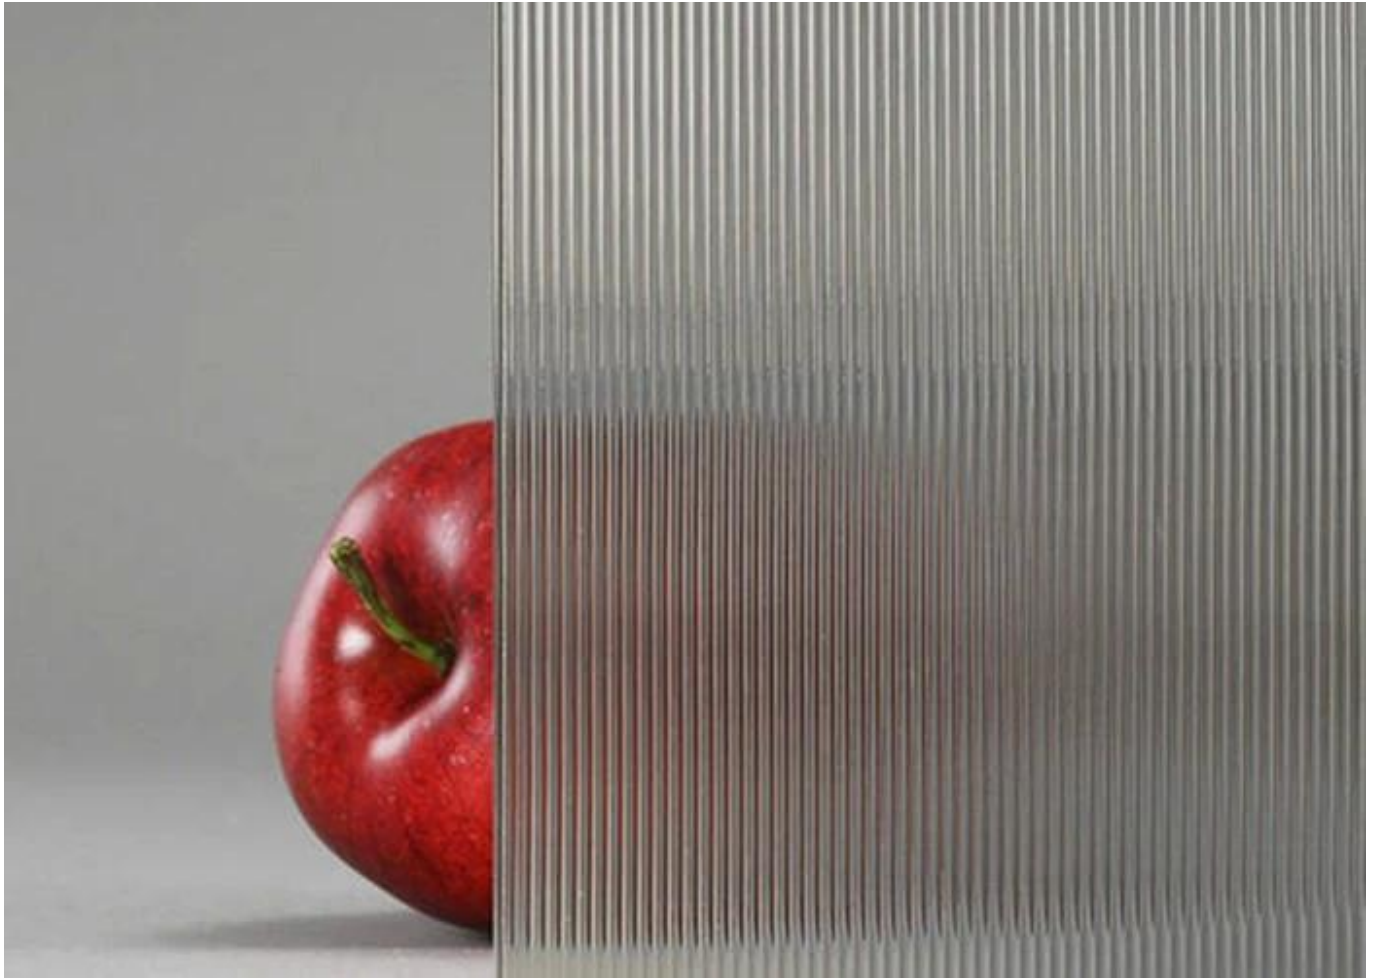

Fluted glass solves the problem of creating privacy while still maintaining light and airy interior spaces, it is

ideal for internal rooms where the desire for space and privacy meet. The fluted glass delicately distorts the view through the glass pane while allowing light to stream through, perfect for bathrooms or spaces where a slight element of privacy is desired.

Fluted Glass Advantages

- Aesthetic and minimalist design.
- Can be cut, tempered, laminated, coated.
- Low breakage rate.
- Three-dimensional texture.
- Strong visual impact, creating a better decorative effect.

Hardware for Shower Door

Along with the type of shower glass, you will need to select hardware for your glass shower. Hardware needed will depend on the type of doors your shower has - hinged vs sliding door as well as if it is a framed vs frames shower. There are numerous hardware finish options to choose from depending on the style of your bathroom and overall aesthetic.

Type of Glass Shower Door

Hinged Shower Door

This type of shower door can be mounted, so it swings open into the shower or, more commonly, outward into the bathroom. These are good shower door options for shower openings that are too small to fit a sliding shower door.

Sliding Shower Door

For a bathtub/shower combination, the most common shower door option is a sliding shower door. It's also called a bypass door, and generally consists of two or three panels that slide past one another on a track situated at the top and bottom of the tub. This is also the most common type of shower door for a standalone shower. The reason being is that it takes up the least amount of space and can be found in a variety of sizes and styles, so it's cost-effective.

Glass Shower Half Wall

One way to create “spa appeal” in your bathroom is to give the bathroom a lighter and brighter look. A half wall shower enclosure allows more light into a shower while still providing some privacy and keeping water inside your shower enclosure. Shower half walls with glass tops are a popular choice for steam showers.
