

SGG Bronze Nashji patterned glass supplier and manufacturer with super quality

Figured glass is also called patterned glass, or rolled glass. It is grinded with a decorative texture by steel mold, on one or both two sides of the glass panel. By this process, patterned glass permits light to transmit diffusely, meanwhile it stops clear vision through the window. With different patterns applied, the glass has different degrees of translucency and privacy. Patterned glass offers a wide range of designs and conceptions for interior and exterior decoration projects. Patterned glass can be [tempered glass](#) or [laminated glass](#) to meet with security requirements of some projects.

Features:

1. Semi-transparent- We have different patterns that offer different degrees of translucency and privacy.
2. Decoration- a wide range of patterns or texture available, including popular patterns for different countries.
