

Proveedor de vidrio aislante transpacífico de 10mm + 12A + 10mm de alto, unidad de vidrio aislante de 32mm, vidrio aislante de doble acristalamiento.

10mm + 12A + 10mm vidrio aislado está hecho de 10 mm + 10 mm dos unidades de vidrio con espacio dividido por un marco de aluminio relleno con un agente seco de alta eficiencia. El borde del vidrio aislado está sellado con selladores de sellado de alta resistencia. El vidrio aislante debe estar hecho con dos selladores de sellado. El sellador de caucho de butilo a través de una temperatura alta en ambos lados del marco de aluminio para la unión. El otro es el nombre de sellador de silicona para pintar vidrio aislado alrededor. El vidrio aislado tiene una alta adhesividad y un alto ahorro de energía eficiente.

¿Cómo reconocer el vidrio aislante de alta calidad?

Un buen vidrio aislado se llena de gases inertes y agente seco en el centro del vidrio y se ve alto transpacífico no tiene niebla. El borde del vidrio aislante es elástico y cuando se usa el dedo para tocarlo no se puede desprender. Por el contrario, los selladores de vidrio con aislamiento defectuoso deben tener un aspecto similar a los nódulos o la caída de la harina.

características:

1. Ahorro de energía: para la baja conductibilidad térmica del aire sellado entre el vidrio, el vidrio aislado puede reducir la transferencia de calor de adentro hacia afuera. Por lo tanto, puede ahorrar energía en un 30-50%.
2. Rendimiento de aislamiento del sonido: una capa de vidrio puede reducir el ruido a 20-22dB. El vidrio normal aislado puede reducir el ruido a 29-31, mientras que el vidrio especial aislado a 45dB.
3. Alto vidrio transpacífico: el aislamiento se llena con suficiente desecante que puede absorber el vapor en el espacio interior de manera eficiente o penetrar desde afuera para asegurar que el vidrio en el espacio interior esté absolutamente seco y no rocíe.
