Specification:

Size: customized size based on drawing

Floor glass raw material: clear glass, laminated glass, printed glass, frosted glass etc

Surface finish: non slip surface

Glass use for floor glass:

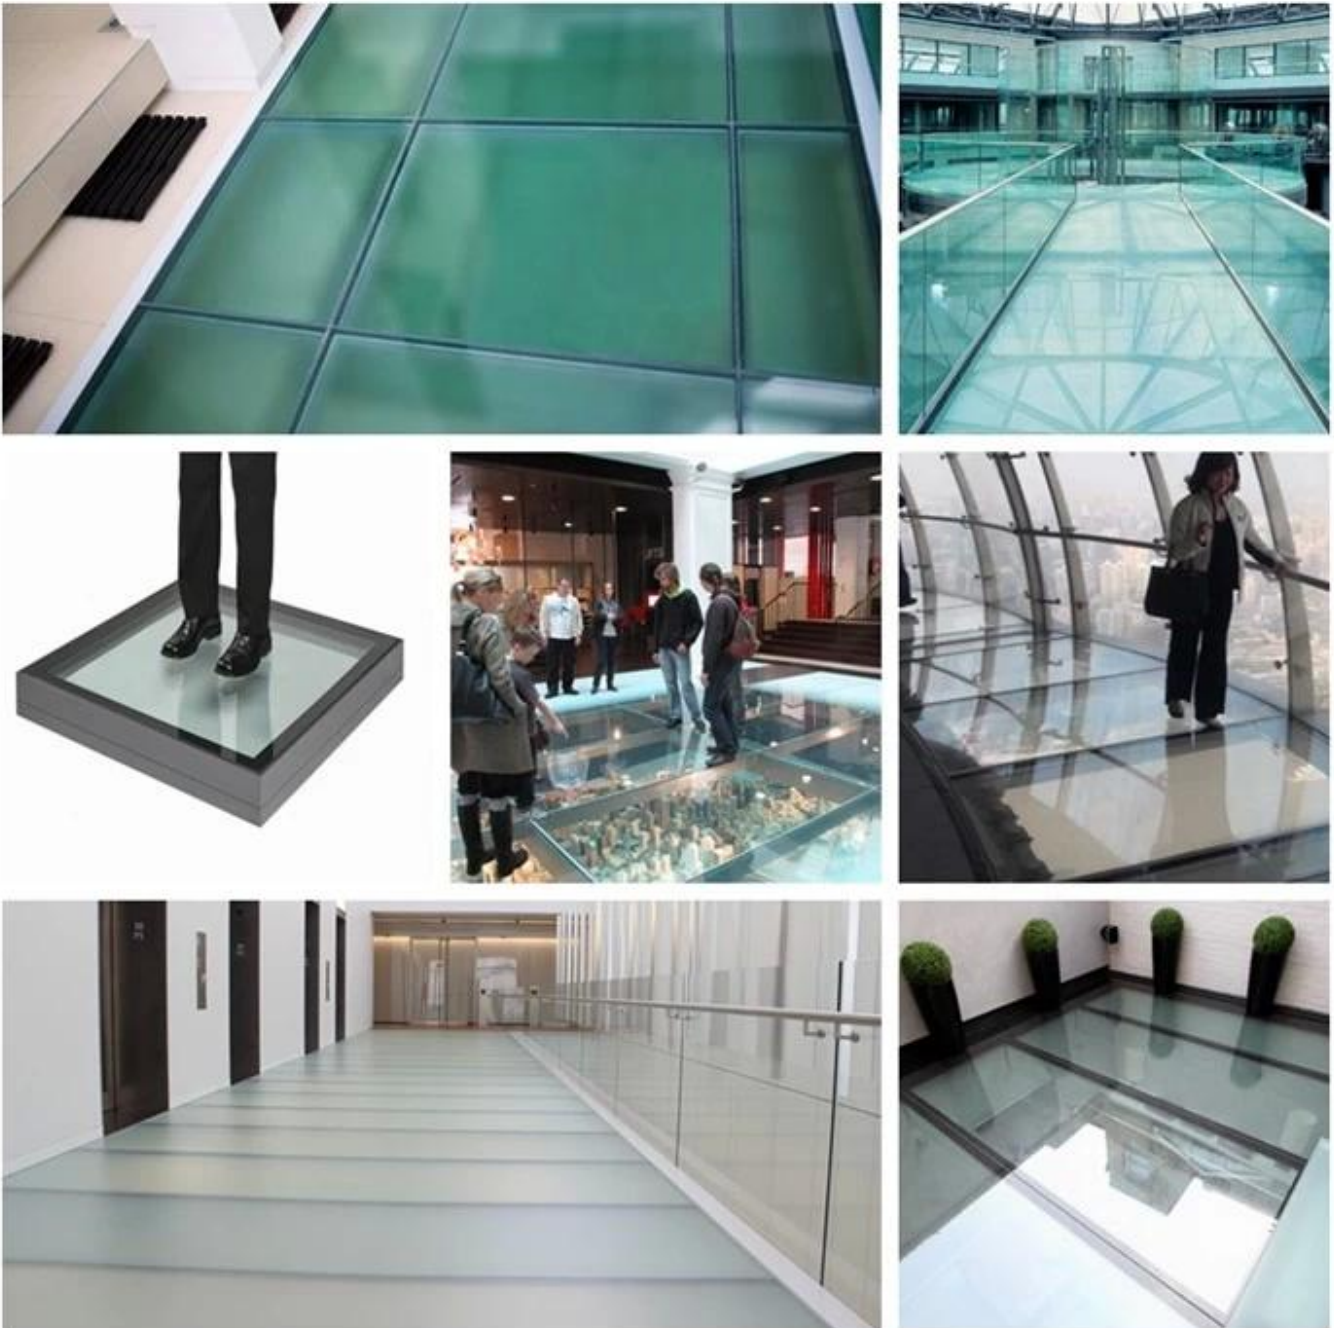

1. Single tempered glass
2. Double/three or multi interlayer tempered laminated glass
3. Tempered insulated glass

These ground glass materials have in common is that they are all made of tempered glass. Differently, according to different environments and usage requirements, different combinations of glass thickness and layers are used.

Advantage of floor glass:

1. Increase transmission, and make more light enter into room.
2. It is convenient for people to display and observe the objects under the glass floor on the glass floor.

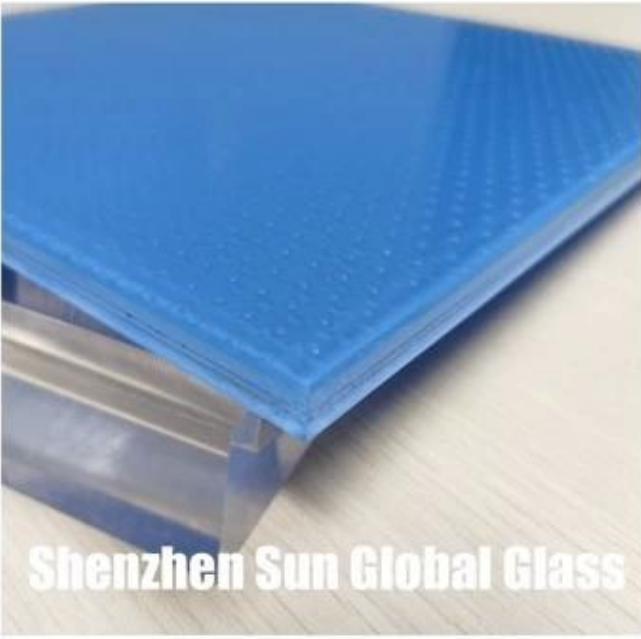

Requirement:

1. Absolutely safe. The structure and plane can withstand any dynamic and static loads and impacts in the design environment. There is a certain anti-impact redundancy design, which can resist the impact caused by certain extreme activities.
2. Anti-slip, floor glass must have certain anti-skid performance and related treatment.
3. Use durability, structure and floor glass material surface must be suitable for long-term use.
4. Flexibility in use. A large number of users want to make some demonstrations under the glass floor. This requires that the construction design of the glass floor should take into account the convenience of

installation, easy adjustment and movement.

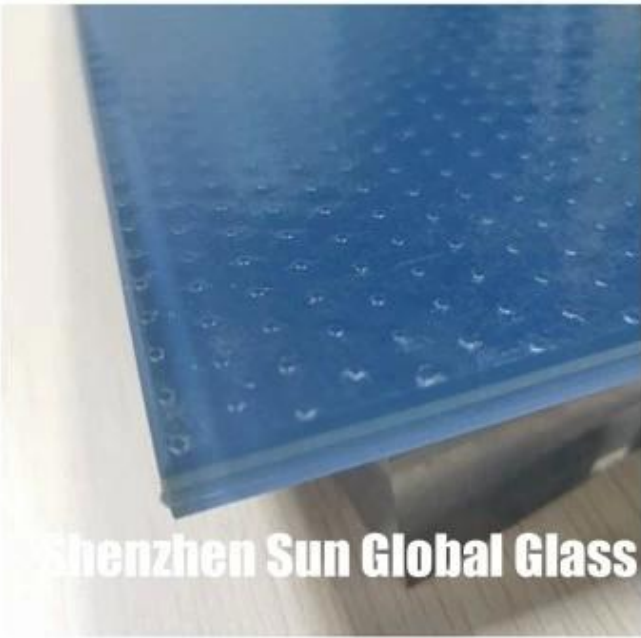

5. Aesthetics. The use of glass with smooth surface quality and no defects to achieve the purpose of aesthetics and beautification of the environment. It can also improve the safety of the glass surface.
