

The Printed Side

Another Side

SZG 6.38mm digital printed laminated glass is comprised of one piece of 3mm digital printed glass and one piece of 3mm clear [tempered glass](#), these two pieces of glass are bonded together with an PVB interlayer using heat and pressure.

Digital printed glass is a customized glass which is produced according to client's requirement. The required pattern is sent by the client to our technology department who will process the pattern. The pattern is then printed on the glass by using ceramic ink, after finished printing, the glass will be fired into the glass during the tempering process.
