

SGG 4mm diamond [Clear Patterned Glass](#)----high quality Patterned Glass Manufacturer in China

The patterned glass also is called figured glass. Its physical and chemical performance almost is same with ordinary transparent glass. Just it allows the light transmission but not transparent. It could soft the light and has privacy protection effect and decorative effect. When installation, the pattern side should towards the interior direction, so that to enhance the decoration perception. But when use the patterned glass as bathroom glass, windows and doors, the pattern side should towards the outside, to prevent the surface soaking in water and then appears perspective.

Features:

- 1.The patterned glass allows the light transmission but not transparent, so it has the privacy protection effect.
- 2.The patterned glass has rich patterns design, so it provide a unique decorative effect.
