

**Aluminum mirror** is produced by high quality float glass ,which is produced by vacuum coating a layer of aluminum.let the melt aluminium splash on the clear float glass surface in the vacuum chamber, and then coated with two layers of protective paint. Quality mirrors are coated with double paint.

Features:

- 1.SGG aluminum produced by Grade A float glass with a flat surface and accurate size bu CNC cutting machine.
- 2.No distortion
- 3.Non-toxicity, Environmental Protection
- 4.Fashion design

**Advantages of SGG Aluminum mirror glass.**

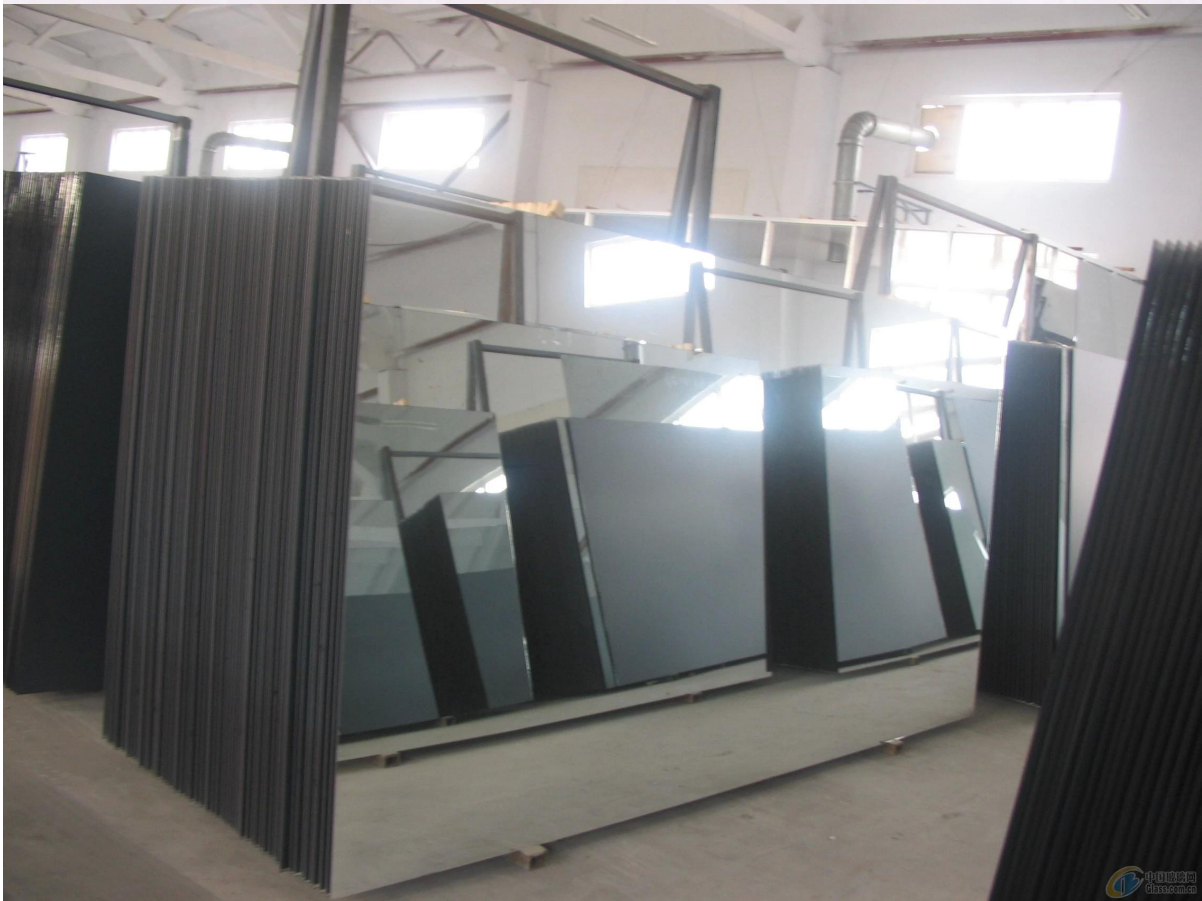

1. The new manufacturing process is more environmently friendly at it excludes the use of copper and lead. Polluting waste products are considerably reduced during manufacture and downstream processing stage .It also means that the products is easier to recycle.
2. Improving the optical of mirror and glass . Exclusion of copper from the silvering process prevents clouding and minimises the veil effect, transform internal spaces with brilliance and perspective (maximisation effect)
3. Increased Durability . aluminum mirror surpasses the durability requirements that are defined in standard BS EN 1036 and its resistance to ageing tests is three times that of aconventional mirror

**Notice**

- 1.Aluminum mirror is not waterproof,can not put in the humid situation such as bathroom or near water.
- 2.Aluminum mirrir is not able to beveled or polished.
- 3.Customized size and shape will be accepted,also can processed as safety mirror such as tempered and laminated.
