

## 8MM [tempered glass](#) - [tempered glass](#)

8MM [tempered glass](#) is a type of safety glass that has been treated with heat to increase its strength and resistance to impact. It is commonly used in windows, doors, and other applications where safety is a concern.

[8mm tempered glass](#) is a type of safety glass that is 8mm thick. It is made by heating a piece of glass to a high temperature and then rapidly cooling it. This process creates a surface layer of compression that makes the glass much stronger than regular glass. [8mm tempered glass](#) is used in a variety of applications, including windows, doors, and shower enclosures.

8mm [tempered glass](#) is a type of safety glass that is 8mm thick. It is made by heating a piece of glass to a high temperature and then rapidly cooling it. This process creates a surface layer of compression that makes the glass much stronger than regular glass.
