

SGG Blue Tinted Float Glass 5mm - Excellent decorative glass options

Tinted float glass is made by adding color pigments to the raw material in the float process. The color density is a function of thickness, as the glass gets thicker the density of the color increases and the amount light transmittance decreases, tinted glass reduces a lot of sunlight transmitted, also absorbs some solar energy.

Features:

- 1. UV rays: tinted float glass** most of harmful radiation can be reduced, even can reduce 80% of the transmission of harmful rays.
- 2. Solar control:** Energy saving through good heat absorption and reflection which reduces the transmission of solar heat radiation
- 3. Decorative:** high value creation by color variety of building's exterior appearance
- 4. Deep process:** perfect quality of glass for deep processing, cut to size, edge polishing, tempering, lamination, and insulate.

Applications of light blue tinted float glass 5mm:
