

SGG Tinted Glass 5.5MM dark Grey- Can be coated to be dark gray mirrors

As we know that the process of Tinted Glass is similar to clear anneal glass. That is putting prescribed quantity of tinted agent to mix with molten glass, which flows through tweek to Tin Bath and then to lehr. While floating through the molten tin, the glass under the works of gravity and surface tension becomes smooth and flat at both sides. The amazing advantage of tinted glass is that It can reduce solar transmittance.

Especially to tinted grey color glass are not spectrally selective, and reduce the penetration of both light and heat. Both dark gray and euro grey are available from us, thickness from 4mm to 10mm.

The Main Features About SGG 5.5MM Dark Grey Glass:

- Solar control performance, to reduce the air-conditioning expense. For example: to reduce internal and external reflection, light glare, and offering improved privacy compared to other clear glass and other colors.
- Reduce light transmission when compare to other colors which have same thickness.
- Have good performance to reduce UV radiation.
- can be dark grey tempered glass, dark grey laminated glass, dark gray insulated glass, dark gray frosted glass, etc.
