

AG glass is a kind of high light transmittance and Low reflectivity glass. It is produced with chemical treatment. Because of the high light transmittance and low light reflection (almost 0%). Anti glare glass can lower the influence of surrounding light, improve the visible range and light level of monitor, and reduce the reflectance. The images will be extremely clear and colorful. So AG glass is widely used in Photo frame, CRT, PDP and tablet PC.

Specification:

Glass type: 5mm AG glass

Color: clear

Thickness: 2mm 3mm 4mm 5mm 6mm

Available size: customized sizes based on customers' requirements

Max size: 1.2x1.65m

Surface: AG coating

Transmittance: 93%-99%

Reflectivity: less than 1%

Quality: A grade

Features:

1. High light transmittance and low reflectivity. (almost=0%) so the AR glass will make objects extremely clear and colorful
2. Anti Dazzle
4. Can be processed such as tempered and laminated

Application:

Photo frame

CRT

LCD

PDP

Tablet PC
