6. Packing: brand new, seaworthy wooden case with foam protection inside
7. Delivery time: within 7 days after check your payment
8. Etching one side or both sides are available

What is the difference between acid etched glass and sandblasting glass?

1. Different surface treatment

Acid etched: Using chemical acid for surface treatment

Sandblasting: Using high speed machines that blast down on the glass surface with sand.

2. the smooth of surface

Acid etched: has a smooth surface

Sandblasting: has a rough surface

3. Sandblasting glass is out of style production mode. Now most frosted glass produce with acid etched.

10mm Acid Etched Glass Features:

1. acid etched glass has a smooth surface and elegant appearance.
2. High light transmittance to assure the maximum light, as well as privacy security.
3. No fingerprint
