

8+8mm Laminated Glass Aluminium U Channel Railing System

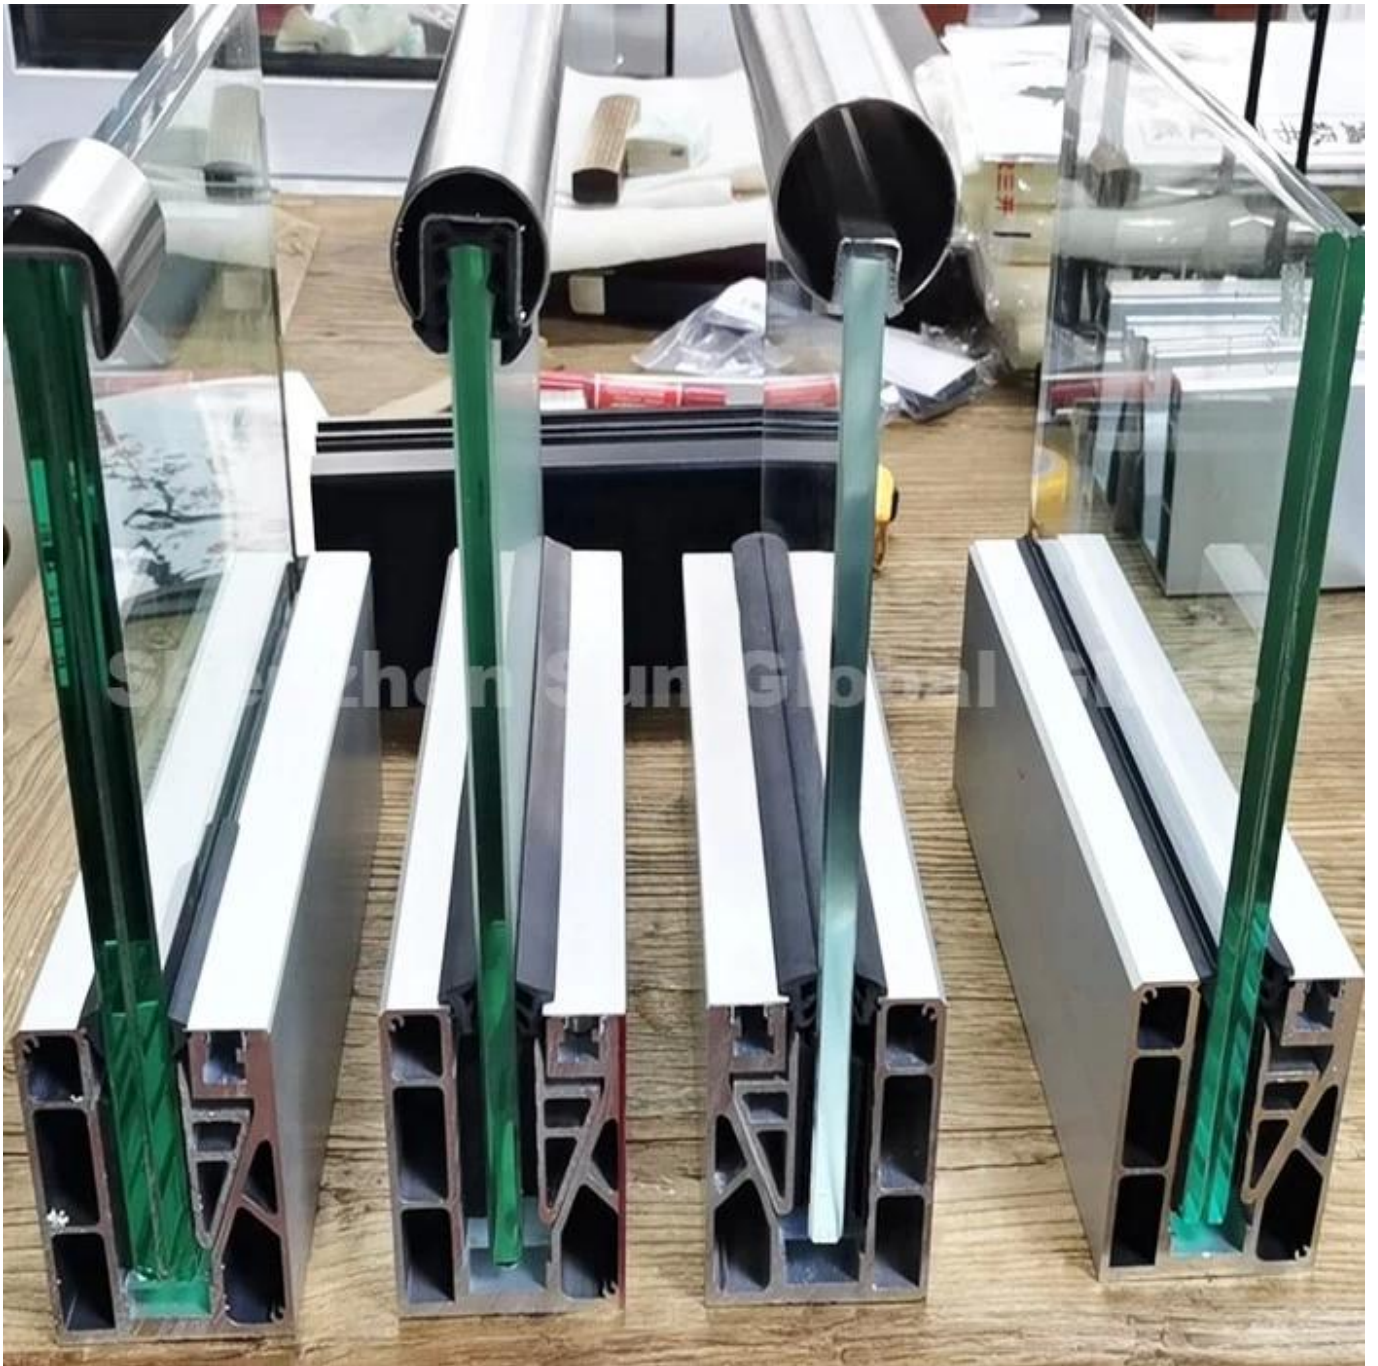

Glass for Railing System

[8+8mm/17.52mm tempered laminated glass](#) is made by pasting 1.52mm PVB (polyvinyl butyral) resin glue film between two pieces of 8mm tempered glass sheet, then heating, pressing and bonding them together to create compound glass product. Laminated glass impact resistance is several times higher than that of ordinary sheet glass. Due to the adhesion of PVB glue film, even when the glass breaks, its fragments keep binding on the thin film and will not hurt people, and the surface of the fragmented glass remains clean and smooth, which effectively prevents fragments from penetrating or falling, thus ensures human safety.

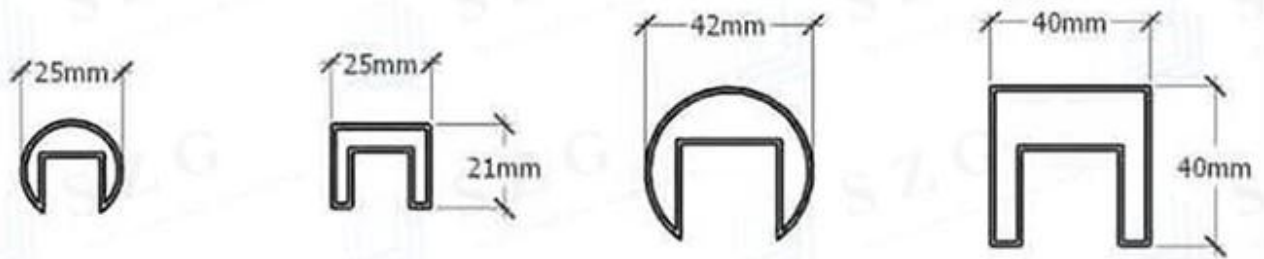

Hardware for Railing System

Stainless steel top handrail framed railing and frameless railing design can be customized base on your demand.

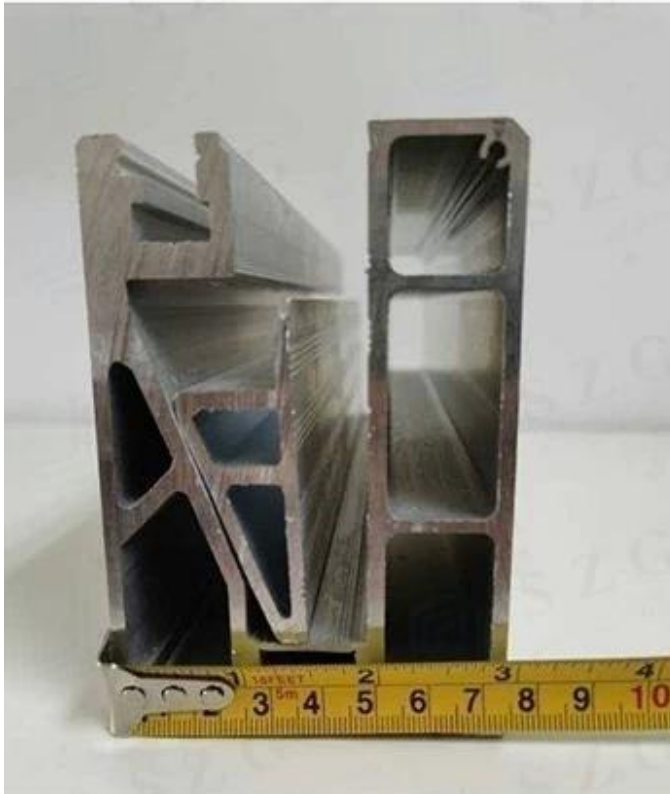

Dimension of Hardware

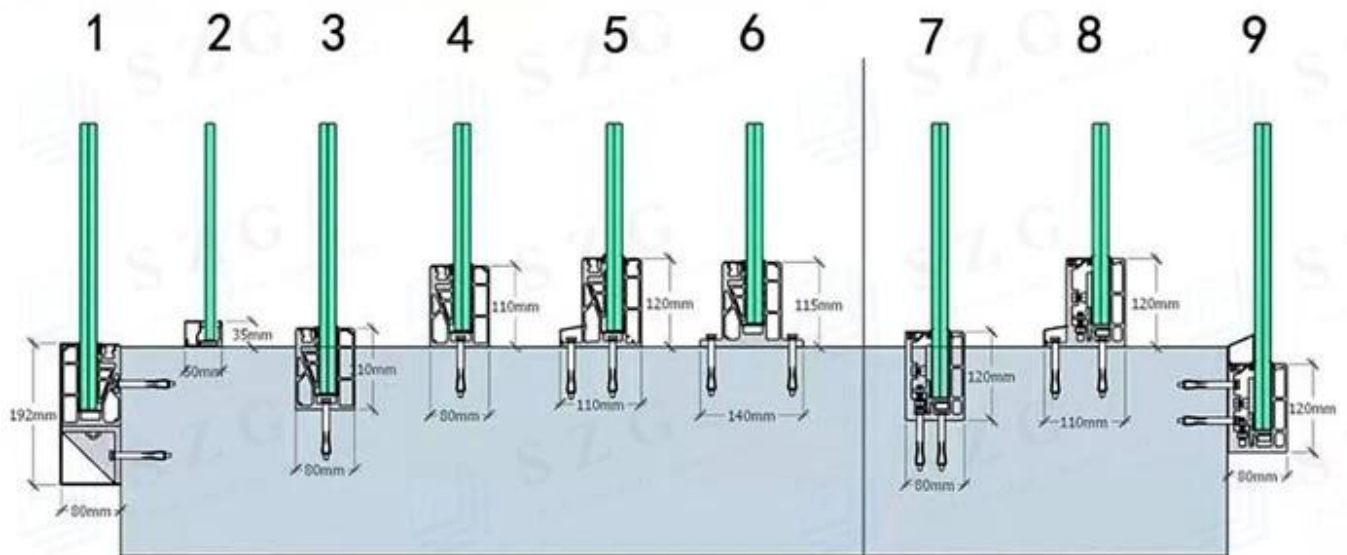

Handrail Top

Aluminium U Channel

Basement of Aluminium U Channel

Applications

Stair handrail

Balcony railing

Deck railing
