

Glass for Shower Door

8mm frosted glass is a clear sheet of glass that is turned opaque through the process of acid etching. Because of light scattering during transmission, the glass comes out as translucent, obscuring visibility even as it transmits light. Frosted glass is made translucent either for privacy or decorative purposes. Frosted glass can be tempered, the tempering of the frosted glass can only be done after completion of acid etched, which is the process that makes the glass translucent. The customizations of frosted glass can be done on the glass range from etched logos, patterns, etc.

Why Tempered Frosted Glass for Shower Door

Its translucent surface provides a great degree of privacy. At the same time, it allows light transmission. This eliminates the need for artificial lights.

It is a great alternative to curtains. For instance, many people find curtains in bathrooms a hassle to maintain, and some don't prefer them simply for the love of better aesthetics. In such cases, using frosted glass is a better option.

Frosted glass is available in a plethora of different colours and designs. Hence, it is not only used for its functionality but also for its aesthetic appeal.

It can be easily cleaned as it is highly resistant to scratches and is low-maintenance.

It provides a pleasant and comforting environment as the translucent surface of the glass diffuses light uniformly, reducing the glare of light.

Fittings for Shower Door

SZG provide you the whole set of shower door, include glass, stainless glass clamp, door handle, hanging wheels, waterproof strip etc. Welcome to contact is and custom your shower door.

Glass Shower Door Design

Hinged Shower Door

Hinged, also known as pivot or swinging, shower door enclosures consist of one or more glass lites with two or three hinges on one side that allow the door to open inward or outward. This enclosure style requires space for the door to swing open. The pricing will vary based on the size of the glass and the type of hardware chosen.

Sliding Shower Door

The sliding door is frameless, with one or both of the glass lites gliding due to rollers. This type of shower enclosure could include larger lites of glass. The sliding glass shower door can be used with the popular barn-door style hardware in a number of finishes.

Corner Shower Door

The corner shower door enclosure consists of two or more lites of glass on two or more sides. This type of enclosure is ideal for bathrooms with more space as the two sides of the glass should not be close to any walls.

Curved Shower Door

A curved shower door enclosure is similar to the corner door, but with curved glass. Curved glass is more expensive than standard flat glass. However, a curved door will add a unique feature to your home.
