

Поставщик прозрачного стеклопакета высотой 10 мм + 12 А + 10 мм, стеклопакет 32 мм, стеклопакет с двойным остеклением.

10мм + 12А + 10мм изолированное стекло изготовлен из стекла 10мм + 10мм с пространством, разделенным алюминиевой рамой, заполненной высокоэффективным сухим средством. Край стеклопакета герметизируется высокопрочными герметиками. Для стеклопакета необходимо два уплотнительных герметика, один из бутилкаучукового герметика при высокой температуре выше с обеих сторон алюминиевой рамы для склеивания. Другой - силиконовый герметик для окраски стеклопакетов, поэтому стеклопакеты обладают высокой адгезионной способностью и высокой эффективностью энергосбережения.

Как распознать высококачественное изолированное стекло?

Хорошее теплоизолированное стекло должно быть заполнено инертными газами и сухим веществом в середине стекла, и оно выглядит высоко прозрачным, не имеет тумана. Край стеклопакета является эластичным, и когда вы касаетесь пальцем, он не может выпасть. Напротив, плохие изоляторы для стеклопакетов выглядят как нюни или выпадают мухи.

Особенности:

1. Экономия энергии - из-за низкой теплопроводности герметичного воздуха между стеклами изолированное стекло может снизить теплопередачу изнутри наружу. Следовательно, это может сэкономить энергию на 30-50%.
2. Характеристики звукоизоляции - однослойное стекло может снизить шум до 20-22 дБ. Обычное изолированное стекло может снизить шум до 29-31, а специальное изолированное стекло - до 45 дБ.
3. Высокая прозрачность - изолированное стекло наполнено достаточным количеством осушителя, который может эффективно поглощать пары во внутреннем пространстве или проникать наружу, обеспечивая абсолютную сухость стекла и отсутствие росы.
